

P.32. Line 1407

The average change over the entire study period will also be examined, if no statistically significant treatment-by-study week interaction is found.

P. 32. Line 1419

Data transformation may be applied if appropriate. Nonparametric statistics may also be applied.

P. 33. Line 1466

Subjects for this study are from the MARL/01/03 study. No additional subjects will be recruited. Assuming that at least 90% subjects from the MARL/01/03 study will participate in this study and there is an additional dropout rate of 20% during the 24 week period, the current sample size is still valid for the statistical analysis.
